Monitoring Data Record

Project Title: <u>R-2547C (Site 8B)</u> COE Action ID: <u>2002-2-0819</u>							
Stream Name: UT to Marks Creek DWQ Numbers: 011689							
City, County and other Location Information:							
Date Construction Completed: November 2004 Monitoring Quarter: (3) of 8							
Ecoregion: 8 digit HUC unit: 03020201							
USGS Quad Name and Coordinates:							
Rosgen Classification:							
Length of Project: 249' Urban or Rural: Rural Watershed Size:							
Monitoring DATA collected by: M. Green Date: 11/15/06							
Applicant Information:							
Name: NCDOT Roadside Environmental Unit							
Address: 1425 Rock Quarry Rd. Raleigh, NC 27610							
Telephone Number: (919) 861-3772 Email address: mlgreen@dot.state.nc.us							
Consultant Information:							
Name: Address:							
Telephone Number: Email address:							
Project Status: Complete							
1 Toject Status. Complete							
Monitoring Level required by COE and DWQ (404 permit/ 401 Cert.): Level Monitoring Level 1 requires completion of Section 1, Section 2 and Section 3 Permit States: The permittee will visually monitor the vegetative plantings on all mitigation streambanks to access and insure complete stabilization of the mitigation stream segments. This monitoring will include adequate visual monitoring of planted vegetation for a minimum of two years after final planting, and appropriate remedial actions (e.g., replanting, streambank grading, ect.). If within any monitoring year, bank stabilization is not acceptable as determined by the							
os of Engineers, and remedial action required by the Corps of Engineers is performed, the							
two year monitoring of the affected portions of the stream will begin again.							
Section 1. PHOTO REFERENCE SITES							
Total number of reference photo locations at this site:							
3 photo point locations - 2 photos at each location							
Dates reference photos have been taken at this site: 4/18/06, 8/4/06, 11/15/06							
Individual from whom additional photos can be obtained (name, address, phone):							
Other Information relative to site photo reference:							
Onier information relative to site photo reference:							
If required to complete Level 3 monitoring only stop here; otherwise,							

Estimated causes, and proposed/required remedial action:	Section 2. PLANT SURVIVAL Attach plan sheet indicating reference	photos.
	Identify specific problem areas (m	sissing, stressed, damaged or dead plantings):
	Estimated causes, and proposed/re	equired remedial action:
ADDITIONAL COLOUTIVES		
ADDITIONAL COMMENTS: Vegetation is dormant for the 3rd quarter of monitoring. Live stake and bareroot seedlings noted on the streambank and in the floodplain consisted of black willow, baldcypress, grash, swamp chestnut oak, overcup oak, sweetgum, sycamore, and tulip poplar. Other vegetation noted consistence and support of the streambank and in the floodplain consistence of black willow, baldcypress, grash, swamp chestnut oak, overcup oak, sweetgum, sycamore, and tulip poplar. Other vegetation noted consistence of support of the streambank and in the floodplain consistence of black willow, baldcypress, grash, swamp chestnut oak, overcup oak, sweetgum, sycamore, and tulip poplar. Other vegetation noted consistence of support of the streambank and in the floodplain consistence of black willow, baldcypress, grash, swamp chestnut oak, overcup oak, sweetgum, sycamore, and tulip poplar. Other vegetation noted consistence of support of the streambank and in the floodplain consistence of the streambank and in the streambank and in the floodplain consistence of the streambank and in the streambank and	and bareroot seedlings noted on the streamsh, swamp chestnut oak, overcup oak, oak, ove	mbank and in the floodplain consisted of black willow, baldcypress, greweetgum, sycamore, and tulip poplar. Other vegetation noted consisted

Section 3. CHANNEL STABILITY

Visual Inspection: The entire stream project as well as each in-stream structure and bank stabilization/revetment structure must be evaluated and problems addressed.

Report on the visual inspection of channel stability. Physical measurements of channel
stability/morphology will not be required. Include a discussion of any deviations from as-built
and an evaluation of the significance of these deviations and whether they are indicative of a
stabilizing or destabilizing situation.
The stream is stable for the 3rd quarter of monitoring. There are no problem areas to report at this time.

down cut					
present?					
Bank or scour					
erosion					
present?					
Other					
problems					
noted?					

NOTE: Attach separate narrative sheets to each monitoring report describing/discussing the overall monitoring results. Include the identification of specific problem areas/channel failures, estimated cause and proposed/required remedial action. This should include a brief discussion of any parameter that has changed significantly from as-built.
